## MUNITIONS RESPONSE

### Munitions Response Site Quick Facts

## Wood Hollow Training Area

The Wood Hollow Training Area Munitions Response Site (MRS) consists of 78 acres and is located in an area of low lying hills and ridges along the northeastern boundary of the installation. Like other sites, the Wood Hollow Area doesn't have a documented formal training history. However, it is believed that the majority of training in the area surrounding the MRS would have occurred between 1920 and 1940.

French 75mm artillery shells have been discovered in this area. Portions of the MRS and an area just east of the site are part of an ongoing rock mining operation performed by Construction Materials Company Inc. (CMC). The cities of Herriman and Bluffdale are located to the north of the site.

### MRS Quick Facts

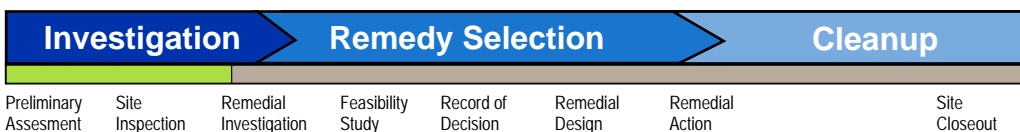

**Geographic Area:** 78 Acres

**Historic Use:** Artillery training may have taken place in this area from 1920 to 1940.

**Potential Community Impact:** May impact residents who use land for hunting or recreational purposes.

**Investigation History:** Three French 75mm artillery shells were discovered in this area in 2001. Up to 34 French rounds plus shrapnel and fuses were also discovered in 1991 during Operation Clean Sweep, a visual reconnaissance. The 2007 Site Investigation found eight French rounds in two piles. These were likely remnants from Operation Clean Sweep.

## CERCLA Process

*The Wood Hollow Training Area is currently in the Remedial Investigation phase of the CERCLA process. CERCLA is the federally approved cleanup process used during environmental investigations.*
